Further development of the Lugaia SafeStick

With the SafeStick, Lugaia Containment Solutions guarantees a safe, inexpensive and simple closure element for transfer bags of all types and sizes. In order to best meet our customer needs, the SafeStick has been revised over the past few months. The new version of the Lugaia SafeStick and the associated safety locks are now available.

What's new?

Handling has now become even easier with the new version 2.0. On the one hand, the new Lugaia SafeStick has protective caps on both sides in order not to damage the film material of the bags. On the other hand, the new safety locks can be mounted and loosened at any position on the SafeStick and no longer have to be pulled from the edge over the entire SafeStick. The risk of injury to the bag is reduced.

The Advantages of SafeStick:

- Completely made of PE
- Guaranteed tightness due to the omega profile
- Available in different lengths
- Can be used for all bags
- Easy Handling
- High occupational safety
- Universally applicable
- High quality
- Inexpensive
- Protective cap

Profile cross-section

Installation of SafeStick and safety locks

Install SafeStick to TransferBag

Press round stick into Omega Profile

Install safety lock

Close safety lock
